# GHOST

GHOST can provide access to littoral waters around the world. A squadron of ten stealth GHOSTs, carrying torpedoes, missiles, or cannons could wreak havoc on any enemy. GHOST is a true street fighter, designed for high speed attacks with a low radar signature and internal weapons bay. With a reduced magnetic and pressure signature, GHOST is less vulnerable to mines and torpedoes. It can be equipped to attack land or sea-based targets. GHOST also can be configured for mine and submarine warfare as well as command and control missions.

Base price - \$10.0 million.
